

Abbreviated SSQ-P questionnaire for children with cochlear implants (SSQ-P10)

The SSQ-P10 is a validated shortened version of the SSQ-P for use in the clinical management of children (aged five years and over) who use hearing aids and/or cochlear implants. Specifically, the SSQ-P10 aims to obtain information about a child's ability in the areas of speech perception, spatial hearing and qualities of hearing.

The SSQ-P10 is a validated shortened version of the SSQ-P for use in the clinical management of children (aged five years and over) who use hearing aids and/or cochlear implants. Specifically, the SSQ-P10 aims to obtain information about a child's ability in the areas of speech perception, spatial hearing and qualities of hearing. Face and content validity has been confirmed via statistical methods (item response theory), thematic analysis of parents' feedback and expert opinion.
