

## Control of Eating Questionnaire (CoEQ)

**The Control of Eating Questionnaire (CoEQ) is a brief, 21-item scale to assess the severity and type of food cravings an individual experiences.**

The Control of Eating Questionnaire (CoEQ) comprises 21-items across 4 sub-domains that are designed to assess the severity and type of food cravings an individual experiences over a pre-defined retrospective period (e.g. 24h; 1-week; 1-month). The CoEQ has been used in clinical trials as a multi-dimensional measure of appetite, craving and mood regulation. The CoEQ has good psychometric properties with a clear component structure and internal consistency. The CoEQ is valid as a measure of the experience of food cravings.

### **Commercial Licences:**

If you are interested in using the CoEQ for commercial purposes, including clinical, organisational, or consultancy applications, please get in touch to discuss licensing options. We offer tailored licence agreements to suit different commercial needs.

Contact us at [enquiries@licensing.leeds.ac.uk](mailto:enquiries@licensing.leeds.ac.uk) to begin the conversation about commercial licensing.

### **Academic/Research Licences (available to order):**

The CoEQ was originally developed in the UK and in English. It is available for academic and research use under the following conditions:

- Original UK/English version: Free of charge for academic/research (i.e. **non-commercial**) use only
- Translations: Available for academic/research use at a cost of £350 (excl. VAT) per translation. You can request translations during the checkout process (**coming soon**)
- Approval Process: All orders are subject to approval.
- Eligibility: Academic/research licences are only granted to individuals affiliated with a university or recognised research institution.
- Email Requirement: Requests must be submitted using an academic email address, either your own or your supervisor's.
