## MS-WIS Multiple Sclerosis Work Instability Scale

**A Work Instability Scale questionnaire consisting of 22 statements made by people who are working with Multiple Sclerosis, together with Scoring and Guidance for use in the clinic.**

A Work Instability Scale questionnaire consisting of 22 statements made by people who are working with multiple sclerosis (MS-WIS). Answers are given using a binary TRUE / NOT TRUE format dependent on whether they apply to the respondent. MS-WIS is a simple, validated screening tool for Work Instability (the consequences of a mis-match between an individual's functional ability and their work tasks). This is a self-administered measure enabling the monitoring the risk of Work Disability in multiple sclerosis patients.
