

Psoriatic Arthritis Disease Activity Score (PASDAS)

Assessment of psoriatic arthritis by an equation and supporting software, used by clinicians.

The Psoriatic Arthritis Disease Activity Score (PASDAS) is an equation clinicians use for assessment of psoriatic arthritis. The equation pulls together scores from a variety of measurements, including questionnaires such as our own LEI and others (e.g. SF-36).

Commercial Licences:

If you are interested in using the PASDAS Score for commercial purposes, including clinical, organisational, or consultancy applications, please get in touch to discuss licensing options. We offer licence agreements to suit different commercial needs.

Contact us at enquiries@licensing.leeds.ac.uk to begin the conversation about commercial licensing.

Academic/Research Licences (available to order):

The PASDAS was originally developed in UK/English. It is available for academic and research purposes under the following terms:

- Original UK/English version: Free of charge for academic/research use only (i.e. strictly non-commercial purposes).
- Approval Process: All licence requests are subject to review and approval.
- Eligibility: Academic/research licences are only granted to individuals affiliated with a university or recognised research institution.
- Email Requirement: Requests **must** be submitted using an academic email address (either your own or your supervisor's).
