

UNIVERSITY OF LEEDS

The Leeds Enthesitis Index (LEI)

The Leeds enthesitis index (LEI) is a tool for measuring the activity of enthesitis in psoriatic arthritis. Enthesitis is a key feature of this disease, and a target for treatment. Almost all new pharmaceuticals tested for psoriatic arthritis are tested against this metric, in addition to others

The Leeds Enthesitis Index (LEI) measures the severity and activity of enthesitis, inflammation at the attachment of ligaments and tendons to bone. It is a simple tool requiring the clinical assessor to elicit tenderness at 6 enthesitis sites: both lateral epicondyles of the humerus, both medial condyles of the femur, and the Achilles tendon insertions using a simple scoring system to obtain the score.

Commercial Licences:

If you are interested in using the Leeds Enthesitis Index (LEI) for commercial purposes, including clinical, organisational, or consultancy applications, please get in touch to discuss licensing options. We offer licence agreements to suit different commercial needs.

Contact us at enquiries@licensing.leeds.ac.uk to begin the conversation about commercial licensing.

Academic/Research Licences (available to order):

The LEI was originally developed in UK/English. It is available for academic and research purposes under the following terms:

- Original UK/English version: Free of charge for academic/research use only (i.e. strictly non-commercial purposes).

Translations:

Arrange your own translation of the original UK/English version (subject to licence terms), or

Purchase an official validated translation (includes Certificate of Translation) for academic/research use **only** at a cost of £350 (excl. VAT) per language.
