

Social Difficulties Inventory

Social Difficulties Inventory (SDI-21) is a twenty one item questionnaire developed to assess everyday problems experienced by cancer patients.

The Social Difficulties Inventory (SDI-21) is a twenty one item questionnaire developed to assess everyday problems experienced by cancer patients. Responses to all items are on a 4 point scale ranging from “0” no difficulty to “3” very much difficulty. SDI-21 scores may be reported in three ways:

1. Individual item scores
2. Three subscale scores (Everyday living, Money matters, Self and others)
3. Social Distress (SD-16) score
